**Re: ITL Technologies Limited**

ITL Technologies Limited has worked extensively with TE Connectivity and the AMP NETCONNECT and KRONE product over a long period and is one of the premiere networking installation companies in New Zealand. As such they were invited to participate in both the AMP NETCONNECT and KRONE worldwide certified installer programs for designing, installing and supporting Structured Cabling Systems (SCS). Furthermore ITL Technologies Limited were appointed "Gold Partner" status in 2005 in recognition of their high standard of work and their loyalty to the global certified installer program. This relationship is not exclusive but is restricted to only a few companies in New Zealand.

The selection criterion for this relationship with TE Connectivity is that the installation company has a successful track record in the installation of LAN/WAN hardware and cabling systems. They must make on-going commitments to staff training and development, be able to provide fully integrated solutions using both copper and fibre-optic technologies and have a proven track record of competence in major installations and network support.

Also having completed the TE series of training courses, ITL Technologies Limited are able to offer the 25-Year System Performance Warranty on any installation they complete. Only TE certified installers are able to offer this level of warranty and authorisation is restricted to the premiere installation companies within any geographical region worldwide. This warranty supports the link and channel performance of Standards based implementations of copper and fibre-optic cabling solutions and is not restricted by the applications running over it. Link & channel performance levels are warranted to, ISO11801 and AS/NZS3080 limits.

ITL Technologies Limited and TE Connectivity work closely to ensure that high standards are maintained in inventory control, forecasting, quality control and provisioning the installation, testing and support of AMP NETCONNECT or KRONE Structured Cabling Systems. TE is proud of our relationship with ITL Technologies Limited and supports them as a premiere networking Installation Company of world class.

Sincerely

Tony Gibbs RCDD  
NZ Manager  
TE Connectivity – Enterprise Networks Division
